Commodore buy up Amiga

Commodore has bought up the Californian company Amiga, who revealed the prototype of the Lorraine, an exciting new personal computer, at the Chicago Consumer Electronics Show in June.

The Lorraine's capabilities far outclass its competitors and could even outstrip the QL, at a staggeringly low price — \$1500. These are standard features:

- Motorola 68000 micro-processor chip — the same as in the Apple Macintosh.
 - 128K of RAM, 64K of ROM, with built-in BASIC and speech software. The BASIC is reported to be very fast and compatible with Applesoft and features extra graphics
- Continued on page 5*

New Acorn micro

It now seems certain that Acorn will be demonstrating its new business machine for the first time at the PCW show, to be held at Olympia from 19 to 23 September.

Known as the ABM, the Advanced Business Machine, the computer may be rechristened for its launch, with a snappier name. The range will include more than one computer, and may even stretch to 13 different combinations.

The ABM will not be going on sale at the show; rather the demo will serve as an exhibition of what Acorn has been working on since the Electron. The ABM is based on the BBC computer, plus second processor combination. It will have the facilities to be upgraded to a graphics system with many thousands of colours.

The most radical change in the new machines is in the disc filing system. The system used in the BBC B will be superseded by a double density controller. This will not only expand the capacity of disc storage but also offer some of the features which were missing from the 0.90 DFS. The new disc format

Amiga

From front page

commands. The RAM can be upgraded to many Megabytes.

- Medium-resolution graphics of 320 x 200 pixels, hi-res graphics of 640 x 200 pixels, with an amazing total of 4096 colours.

- Eight sprites, with up to 16 colours each, with collision detection and display priorities. Frame buffer animation — a feature which enables you to pick up a piece of the screen and move it. Split-screen graphics: each screen window can display different graphics modes, even with fine scrolling.

- Built-in 320K double-sided disc drive

- Built-in 300 baud modem

- Expansion to hard disc drive; front cartridge slot

- Four sound channels; very impressive sound. The speech software uses one channel and the Lorraine talks in male and female voices.

At the CES show Amiga was assuring the trade that the Lorraine would be supplied with a bundle of software, which would include a disc operating system, word processor and spreadsheet.

The Amiga was projected to be ready for shipment by Christmas. Now that Commodore has taken over, the future of the Lorraine is in their hands. Commodore was reticent about plans for the Lorraine; they are now in control of an innovative machine which could be the first of a new generation of micros.

Acorn

From front page

will not be compatible with the old one.

It is likely that there will be a quantity of bundled software to go with the new machines, including the View word processor, Viewsheet and maybe some business software.

It is not clear which second processor will be available, but the 32016 (formerly 16032) would seem unlikely as its manufacturers, National Semiconductor, are not producing the chip in sufficient quantity.

Even if a 32016 machine is the one used for the demos, it will be a long way from

production, and moreover expensive.

There may be a portable computer among the new machines. This would be an opportunity for Acorn to cash in on the success of the Commodore SX64.

Also due to make its debut at the PCW show is the long awaited Disc Interface for the Electron, to be known as the Plus 3. This will use the new advanced disc filing system and be able to store 320K on each of its 3.5 inch Sony discs.

The new DFS will allow the Electron to go into Mode 6, which is fast enough to cope with disc access. This overcomes the problem of slow loading.

Acorn software will also be on show: Acornsoft's "Mega-game," Elite, will be previewed. This game represents a considerable amount of work and features 3D animation and planet trading. In order to eliminate any chance of Elite being copied before its official launch, no copies of the tape will be available. The game will be demonstrated from video tape.

Dragon lives on

Following the recent demise of Dragon Data, Paul Grade of Worthing has decided to form the Dragon Users' Group.

This non-profit making group needs 250 members to get started, and all ideas and offers of help are welcome.

Those interested should contact either Paul Grade at 6 Navarino Road, Worthing, Sussex, or Neil Scimegor at 125 Occupation Road, Corby, Northants.

Chips for breakfast

Breakfast TV has been around for some time now, and — thanks to Kellogg's breakfast computers are now on the scene, and will be so for the next few months.

'Year 2000' is the company's first major back-of-pack computer promotion, appearing on Kellogg's Corn Flakes packets and featuring Sinclair Research's ZX Spectrum (48K).

Designed to appeal equally to would-be purchasers, Spectrum owners and those without computer knowledge, the promotion features a competition to predict the status of a number of athletics World-records in the year 2000.

A total of 100 ZX Spectrums

are offered as prizes. As a bonus, existing owners can obtain a special £5 discount on any three programs bought directly from Sinclair's software catalogue.

Those still to decide the purchase of a home computer can obtain more information from a specially written free introductory book prepared for Sinclair and Kellogg by Pan — called "What You Always Wanted to Know About Home Computers But Never Dared Ask".

The promotion finished on November 30.

Sinclair Research, 28 Stanhope Road, Camberley, Surrey

Pirate games sold at market

Islington Trading Standards officers recently found pirate computer games on sale in the borough. Officers seized 59 games and 317 music cassettes from an unlicensed street trader at Nag's Head market, Holloway. All the music cassettes were identified as counterfeit, and the majority of the games were also proved to be illegally copied — including Horace and the Spiders, by Psion.

"It appears these counterfeit computer tapes are the first to be found in London, said Martin Grout, senior Tradings Standards Officer.

"This type of counterfeiting will undoubtedly lead to many computer game manufacturers going bankrupt — and purchasers of illegal copies should be made aware of this.

"What's more," he added, the tape used will often be substandard, leading to damage of the recording heads and will in some cases fail to load correctly.

"And the 'flypitcher' may not be around to provide a refund. We recommend strongly that tapes are only purchased from reputable traders, and not from the "here today, gone tomorrow" unlicensed street trader," Mr Grout said.

FAST welcomes software bill

A Bill on computer software copyright, introduced in the House of Commons recently by Conservative MP Nicholas Lyell, has been welcomed by the Federation Against Software Theft.

The Bill seeks to amend the 1956 Copyright Act to provide greater search powers and new penalties for copyright infringement of computer programs. It also establishes beyond all doubt that computer programs are protected by copyright law.

Chairman of FAST, Donald MacLean, commented: "This Bill highlights precisely the changes in legislation required to counter the growing problem of software piracy."

"The entire computer industry — from the mainframe manufacturers to the games software distributors — is united in calling for the sort of change outlined in this Bill."

Mr. MacLean went on to say: "We are particularly encouraged to know that the Government and many individual MPs fully appreciate the need for legislation now, if tomorrow's software is to be safeguarded."

Federation Against Software Theft, Chancery House, Chancery Lane, London WC2

PROGRAM FOR PROFIT WITH YOUR SPECTRUM

Software has now outstripped the areas of basic and simple machine code programs. Do you have the ideas for games but not the know how to produce the code required? Are you put off by the complexities of writing complicated routines?

Have you the problem of finding the time to write that great adventure or arcade game? Professional software houses use special programs to help them generate their product. Now there is available to you a package of commercially marketed programs with which you can write your own text adventures, graphics adventures and arcade games. Packaged together with two books on arcade and adventure programming and sent to you with a Free copy of our fact sheets "Programming for the games market", which includes many hints and tips and a Softwarehouse directory, you can now compete with the top games writers. (Programs include The Quill, Dungeon Builder, White Lightning.) Purchased separately these items would cost you £49.75. As a special offer we are packaging the items at £42.75 a saving of £7.00.

Send for your pack or send SAE for further details to

RAMTOPS, 47 BROOM LAND, LEVERSHALME, MANCHESTER M19 2TX

Shoot the spider

I'm writing in reply to P. Rawlin's letter (HCW 75) about how to get past the first sheet of Jack and the Beanstalk.

First turn to face left and wait for the spider to go down in front of you and jump it. Then get the axe, turn right and shoot the spider. Now climb the beanstalk as high as you can until it plays the tune you hear at the start. That will get you past the first sheet.

Can someone tell me how to get the moneybag and the harp on the last sheet? I keep falling over the giant's leg.

Steven Horsburgh, Eymouth, Berwick

Cheap games are great

I'm writing to you about the £1.99 games from Mastertronic and Atlantis. I now have four of these games, three from Mastertronic and one from Atlantis. They all work perfectly and have kept me playing for hours.

I think it's a good idea to sell them in outlets other than computer stores.

Russell Fenwick, Scarborough

Fed up with Spectrum

I own an Oric/Atmos. I used to own a TI-99/4A, but disposed of it because of the lack of software and the exorbitant prices asked for peripherals.

Now it seems that the Texas 99/4A is being given the consideration it deserves and I am the loser. I am now disenchanted with the Atmos since no-one stocks or even orders stock for this very good machine. I am left to brood over my wrong decision between the Atmos and Spectrum.

HCW and other computer magazines all seem to be part-owned by Sinclair, judging by the numerous articles extolling this or that attribute of the Spectrum. The shops are crammed with Spectrum software — a lot at very reduced prices. Please give some space to

other computers. The Spectrum isn't the only computer in the world.
L. Rudd, Birmingham

Software winner

More Spectrum software is released than for any other machine. That's why more Spectrum reviews are published in HCW. We do publish all reviews for all software submitted to us, and our review pages reflect closely the state of the market. If there's no Atmos software being released, we can't feature it.

We do try to print listings for most major computers but it's up to you to submit your games to us. If we have good Atmos programs we will publish them.

Where's the Gollum?

I bought the Hobbit some months ago. I wonder if any bright reader could tell me how I find the Gollum so that I can pinch his ring?

For any Oric owners, here's an AUTO NEW function. CALL/F42D. Type it in and press return. This has the same effect as pulling the plug out.

Andrew McCormick, Pentcort, Scotland

Help!

I have problems with Phipps' Greedy Gulch. I cannot get the maps or bullets for my gun. I would be grateful if somebody could help me on this.

I have solved Richard Shepherd's Urban Upstart.
Paul Torpey, Tottenham

Switch me on

Please will somebody tell me how to get the lights on in the circus tent, in Circus for the Atari? I know you have to fix the generator but I cannot work out how. Please help.

S. Creagan, Manchester

How to stay alive

Here are tips for people who have the game Wheelie by Interceptor and are tired of racing through the

Bouncing Hedgehogs screen, only to lose their last life when they reach the other motorbike.

At the start of the game press the Enter key or enter one of the following codes. When entered it takes you to the screen in question.

ENTER Bouncing Hedgehogs
WITTY Willy Wallabies
BEBOP All That Bounces
SHARK The Killer Bees
XENON Swarm
ZX83B Spring and Sting
2MQL3 Nightmare Park

My highest score in Automania is 4560. Is this a record?

K. Speck, Bradford

Save your money

I'm writing about the high price of pens for the Commodore plotter. Instead of buying Commodore pens, I suggest you get them from Tandy. They cost about £2 for a tube of three pens and there are two tubes available: all black or one red, one blue and one green. They also sell rolls of the special paper required in boxes of three rolls.

You could also get the pens in any store selling Sharp computers. The Sharp pens are sold four in a tube (one of each colour) but cost slightly more. Both the Tandy and Sharp pens are well under the £5 price tag charged by Commodore.
Mike Curtis, Weymouth

Hints and tips

I'd like to make an appeal through HCW because I'm compiling a list of hints and tips for games playing on the Spectrum. The things I'd like are ways to give you extra lives, higher scores and so on.

I'm also writing a list of what I call "magic POKES" which include short machine code routines to make the border striped, make white noise and disable the break key.

When finished, both lists will be available to anyone who sends me an s.a.c. If you can help, please write to me. You could also enclose your s.a.c. then, but I'll need a few weeks to compile my list.

I'd also like to congratulate David Moore for his

"flash" character set in ZX User, HCW 73.

Paul Booker, 146 High St, Woudham, Rochester, Kent ME1 3UQ

Texas fan

I am a young user of a TI-99/4A. Before you say: "Yuk! It's one of those no-software ones," I would like to say it's not so bad. You can still get software. So look out, BBC and Sinclair, My Texas is very good!

Chris Pepper, Sutton Coldfield

Draw with your VIC

I always read HCW every week and I enjoy doing the excellent programs for the VIC-20. So here's one for you. You can do drawings with it just by pressing U for up, D for down, R for right and L for left.

```
5 LET A = 7932
10 POKE 36879,11
20 GET X$
25 IF X$ = "R" THEN LET A = A + 1
40 IF X$ = "L" THEN LET A = A - 1
50 IF X$ = "U" THEN LET A = A - 22
60 IF X$ = "D" THEN LET A = A + 22
70 POKE A,81
80 GOTO 10
90 END
```

M. R. Lucas, Leicester

Find pi

This program will work out the mathematical number pi. The program will take some time and will only give the number to the number of decimal places available on your machine.

I wrote this program for any Commodore machine but to run it on any other machine you may have to change line 50.

```
10 LET T = 1
20 LET P = 0
30 LET P = P + 1/T-1/(T+2)
40 LET T = T + 4
50 GETAS:IFAS() THEN GOTO100
60 GOTO30
100 PRINT P*4
110 GOTO60
READY
```

Brian Harrison, Killingbourne, S Humberside

WALLY WEEK
is here!

Sensational Software from

MIKRO-GEN

44 The Broadway, Bracknell.

Tel: (0344) 427317

Available for Commodore 64 and Spectrum 48K

You'd have to spend over £3000 to beat our £199 Second Processor.

The BBC Micro is already one of the fastest and most powerful micros around.

But with the addition of the 6502 Second Processor, it becomes the fastest micro in its price range.

(To be fair to the opposition, their £3000+ package includes a disc drive. But a similar BBC Micro set-up with the 6502 Second Processor will cost you less than a third!)

The 6502 greatly expands the Micro's usable memory. Its 64K of RAM combines with the BBC Micro's 32K, for a total of 96K.

It is supplied with its own special version of BBC BASIC, called Hi-BASIC, which allows the maximum amount of this memory to be used for BASIC programs and variables. Other languages allow some or all of this memory to be used for programs, and many will automatically adjust themselves to make maximum use of available space.

What's more, the 6502 uses the same microprocessor as the BBC Micro, but at a much higher speed. Which means programs can run up to 50% faster.

The 6502's extra power enables it to run more powerful software, such as that provided with the Acorn Bitstick, which turns the BBC Micro into a versatile computer graphics station. In fact, it has a variety of features usually found only on much larger systems.

It can also exploit the full potential of local area networking through the Econet system, with Level 2-File Serving.

So to get the most from your BBC Micro, get the 6502 Second Processor.

The 6502 Second Processor is available from your BBC stockist. For the address of

your nearest supplier, ring 01-200 0200.

If you wish to order by credit card, phone 0993 79300 during office hours.

6502 Development Programs

(available separately)

MASM: A 6502 macro-assembler. A full range of macro facilities are provided, including looping recursive calls and conditional assembly.

XREF: A cross-referencer to be used in conjunction with MASM.

ViewEdit: A full screen editor based on the VIEW word processor.

TRACE: A 6502 trace package for de-bugging all types of program.

PRINT: A program to produce formatted assembly listings without using MASM.

The package is provided with a 250-page manual describing all the facilities provided by the system.

Technical Specifications

The Second Processor operates at a clock rate of 3MHz. A version 1.2 MOS will need to be fitted into the BBC Micro before operating the 6502.

Integral power supply

Measurements: 205mm x 345mm

Weight: 2.1 kg

Colour: BBC Computer cream

Construction: Moulded top and bottom to match BBC Computer profile. ABS injection moulded plastic.

Power in: 240v, 50Hz, 3w.

The BBC Microcomputer System.

Designed, produced and distributed by Acorn Computers Limited.

Paradox £7.50

Runesoft, 67 Lower Parliament St, Nottingham NG1 3BB

I'd like to tell you how successful I've been with this, the second "Quilled" adventure from Runesoft. Unfortunately, I can't, I failed miserably! The Publishers say it's the hardest task you'll ever have to face, and I believe them!

An air of mystery hangs over this program. Unlike other adventures, the computer is a separate being who, though not seeing you, can sense your presence. The descriptions are literary; definitely not for those who have trouble reading esoteric words like... esoteric!

Relying on the map kindly provided for reviewers, Paradox reveals itself to be in four parts: navigate the tunnel to reach the

Gamesboard, gather the clues to enter the Crystal Palace, and finally, enter the Magician's Rooms. The whole thing is like a nightmare. Paradoxical indeed. If only I could get myself started!

According to the four A4 pages of maps there are 156 locations, which is a lot for your money. On the other hand, most "Quilled" adventures don't cost this much. Undoubtedly a real challenge, however, and one with a touch of class rarely found in computer games. Paradox could well achieve cult following given the right marketing. **D.M.**

instructions	95%
playability	100%
graphics	N/A
value for money	75%

Ball by Ball £5

Video Software, Stone La, Kinver, Stourbridge, W Midlands DY7 6EQ

It seems to be the policy of Video Systems to inundate its customers with instructions. Not a bad thing in the long run, or wouldn't be if the quality of the game matched the quality of instructions. You do have a little bit of influence over the game inasmuch that you can choose order of play, bowlers and certain factors which influence the quality of play.

If you wanted you could change both teams, but in the end, all the scores and fall of wickets are determined by the computer, in a random fashion. There is no animation, unless you call the changing scores, and over count, animation. I wonder

why the over count is repeated in brackets?

During play various comments are printed to the screen. Such things as "off the leg" or "got a thin edge" etc, and after nearly every over a weather report. I thought that now that I had got used to the vagaries of British weather but in this game it's possible for it to change after every over.

My love for cricket borders on fanaticism but I could not whip up any enthusiasm for this version. **B.B.**

instructions	100%
playability	40%
graphics	30%
value for money	50%

Day of the Match £5

Video Software, Stone La, Kinver, Stourbridge, W Midlands DY7 6EQ

Video Software is anxious that the instructions should not be misunderstood. First they are printed on the inlay card, secondly on a separate sheet, and finally, given in a spoken commentary on the reverse of the cassette.

Should you wish to promote the team you support, this program will make it easy for you. If you understand how to balance skill and luck or strength, fitness, defence, attack, effort; or even the manager, then you may influence them by giving them values from 0 to 9.

Whether you decide on league or cup play, you can choose the teams or leave it to the computer. You don't actually see any play, but the results are displayed and when required, the tables are updated. If you disagree with the results you can choose option 'r' and get them recalculated until you are satisfied.

For quite a lot of the time you are waiting for the computer to do its computations. Personally, I found this a very boring and pointless exercise. The only real random factor is the score, which you can change anyway. **B.B.**

Arcade and adventure action

Here's a cluster of arcade and adventure games for your 48K Spectrum which have been carefully checked out for you by our regular reviewers. Read what they think

Atlantis £4.95

M & J, 7 Charnon Rd, New Parks Estate, Leicester

Another all-text adventure set on a desert island, produced using Gilsoft's "Quill". You are the explorer James Parker who, after 30 years, finds a map showing the location of Atlantis. Landing on the island you are left by the crew and have to find the city in order to leave. You must eat and drink to survive and collect treasure to gain points.

There are 150 locations and 90 objects to eat, drink or carry, some giving extra points. A SAVE routine allows exit from game to replay later and three levels are offered, with 40 commands before death at the easiest.

In all 200 words are contained in the vocabulary. There is no

score on screen and some of your instructions do not lead to a logical spot on the map — assuming you try to draw one. One would assume two moves east, one south, two west and one north would return you to the same spot — no way.

Reaching the edge of the island does not take you into the briny, but last location repeats. At the end, score appears as a percentage.

Not as thrilling as some other adventure games around. **T.W.**

The Journey £9.95

Temptation, 27 Cinque Ports St, Rye, E Sussex

Set in the lands of the Black Warlock, The Journey is a real-time, illustrated text adventure where you have to find the legendary White Ship and set sail to a distant land.

Some creatures roam freely and can be friendly, indifferent or hostile; while others, the Warlock's guardians, guard the routes, treasures or magical objects. Each location presents a written description of the place, objects and characters with available exit routes — sometimes after illustration of location. Screen bottom will display 'what now?' and you type instructions, using 20 commands and up to 32 characters.

Each character possesses the attributes of intelligence, strength and experience: typing 'status' allows checking of your own and others' status. As the game proceeds these attributes alter as you solve problems and eat!

Eight duplicated A4 pages of map, sample solutions and instructions accompanied my copy — giving useful clues.

SAVE and LOAD allow you to save a partially completed game to be continued later.

This is a well planned and designed games program. Practice succeeds — try it and find out for yourself. **T.W.**

We're the duplicators that won't treat you like the next customer

Yes, we're experts in the business of data duplication, both in disc and cassette format. But that doesn't mean we treat our customers like duplicates too! What Micro Byte also does extremely well is to consider the special needs of each individual customer.

For a short run or full scale production, Micro Byte has the capacity (over 120,000 cassettes and 18,000 discs a week in fact) to give you the quality results you're looking for - time and time again.

With years of experience in this field and backed by the most efficient high-tech equipment, you can rely on us to deliver the goods within a speedy 7-10 working days. Both our duplicating service and our full printing and packaging service are so competitively priced, they won't give you any recurring nightmares!

Now you know a bit about us, perhaps you'd like to make yourself our next customer and feel the benefits of our special personal service.

Douglas Brochie will be pleased to answer any individual requirements.

Unique has just released two new games for the Spectrum - Jump and Red Attack. Both cost £5.99 in the shops - or you could win both of them in this week's competition.

And Unique is offering all entrants an additional bonus - the chance to join a Unique fan club free of charge. You'll get information on the latest Unique releases in a monthly bulletin, as well as special reductions on Unique games.

Jump pitches you in a battle with mad apes. You're a cleverly animated character climbing up a sky-scraper. You are being harassed by the occupants of the building, the apes (what else?) They don't seem to like you; they try to discourage you by emptying plantpots on your head.

Other hazards are blinds closing on your fingers and a character who has an unknown vendetta against you. He spends his time emptying out vile substances on your head. These obstacles impede your progress - your aim is to reach the top.

Clever graphics and smooth scrolling are star features of this game.

Red Attack is for you if you enjoy shooting down aliens. You're faced with 72 different waves of hostile aggressors in this game, one for experienced zappers.

Vary the speed of attacks and define your movement keys, then steer your space craft up from the bottom of the screen facing the onslaught. All your skill and expertise will be brought to bear.

The men behind the scenes at Unique are Farhang Mehr and Les Barton. Farhang is a bachelor of computer science who spent seven

Win two great games from UNIQUE

years studying his subject at London University.

Les is the artist for Unique: his work has been published in national magazines and newspapers but he finds working on software more rewarding.

Unique plans to release two more games before Christmas. Progress is slow at the moment. Red Attack took eight months to perfect.

All you have to do to enter our Unique competition is spot all the differences in our picture. Post off your coupon and cross your fingers - you could strike lucky!

How to enter

Study the two cartoons - there are a number of differences between them. Circle the differences on cartoon B and seal the cartoon and

you found on the back of the envelope.

Post your entry to Unique Competition, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. Entries close at first post on Friday September 21, 1984.

You may enter as many times as you wish, but each entry must be on an official coupon - not a copy - and sealed in a separate envelope.

Important: please follow carefully the guidelines on entering - incomplete coupons and entries in envelopes with no numbers on the back cannot be considered. If you are a winner, the coupon will be used as a label to send your prize so clear writing is essential.

The rules

Entries will not be accepted from employees of Argus Specialist Publications, Unique, and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

The How to Enter section forms part of the rules.

coupon in an envelope. Write clearly the number of differences

Unique Competition

Entry Coupon

Name _____

Address _____

post code _____

Number of differences found _____

Complete clearly and fully. If you are a prizewinner this will act as a label. Post to Unique Competition, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. Closing date: first post Friday September 21, 1984. Don't forget to follow closely the advice in the How to Enter section, including writing the number of differences on the back of your envelope.

Those nasty b

These blackety things aren't from a fairy story — they're radioactive spiders who will ruin your prize blooms unless you stop them.

By Peter Williams

You have green fingers and your passion is working in your garden. You're out there all weather, digging and raking, mowing and hoeing, and that's your idea of a good time.

Your one hatred is spiders, and just as you're preparing your prize chrysanthemums for the summer flower show, you're infested with not just ordinary common or garden spiders, but radioactive ones.

Don't panic, there's still hope. You can fight them off by shooting them. It may seem a

drastic measure, but you're obsessed with your patch of garden, and you'll stop at nothing.

If you fail to hit the mark, and five land, then the game is over, as are your hopes for the flower show. If you hit five spiders, then you move up one level, where things get tougher.

Full instructions are given in the game. Whatever else you do, you must avoid touching a sticky spider's web — or you'll die

Hints on conversion

This game should run on any Atari. Because of the machine code, it's not transportable. However, the following information may be useful for anyone with sprite graphics.

POKE 704 with colour of player
POKE 559,46 gives player a two-line res.

POKE 53277,3 enable player missile graphics

POKE 53248 with horizontal position of player

PEEK(53248) to detect player/playing field collision

POKE 53278,0 to clear collisions

PEEK(53252) for missile/playing field collision

The screen is 20 x 24

Variables

PMBASE top of memory
F(4) five landing positions of spiders
CH position of character set
XI horizontal position of player
UP vertical position of missile
YI vertical position of man
X horizontal position of spider
Y vertical position of spider
COUNT number of spiders

L&V level
LIVE life
HIT number of spiders hit
CHO position of CHSET in ROM

Clackety things

How it works

- 100-170 set up machine code routines
- 180 DIM variable F, clear it
- 190 set GRAPHICS mode, change character set pointer to RAM
- 200 set up screen for player missile graphics, place man
- 220 draw wall under man's feet
- 230 set random horizontal position of spider
- 250-270 check two spiders don't overlap
- 280 plot spider's fall rate, print on screen
- 300 decide if spider has landed
- 310-360 move man with joy-

- stick, check for collision with spiders
- 380-430 wipe out spider after hit, increase score
- 440-540 missile mover, machine code missile data
- 550-720 game over routine
- 730-770 deduct one life, return man to centre
- 780-810 increase level by one. If level more than or equal to five, give one extra life
- 820-860 player machine code data
- 880-930 redefine character set
- 940-1090 title page
- 1090-1150 joystick level selector
- 1160-1250 instructions

• Remember to type in the numbers in brackets in the code in the program.

```

Cooking computers?

Since the ground is raked after each equestrian event, a wired finish system could not be used by the IBM PCjr.) has been developed to alleviate the problem.

Now that's what I call going for the gold.

Every once in a while I mention mail order houses which appear to offer good value for money and have a decent reputation. I thought I'd tell you about another good mail order house. CALSOFT is located at 346 N. Kaman Rd #/ 103, Agoura CA 91301 (818) 991-9641. This firm handles personal, educational, business and entertainment software for CP/M machines, Atari, Apple, IBM PC and PC jr., and of course the CBM 64. We just received its Spring/Summer 1984 catalogue, and it looks nice. Most of the popular programs are all available with 25 to 33 per cent off. Additionally, the firm also sells a selected line of books and accessories, all at a significant discount from the suggested list price. Write or call them for a free catalogue. But don't tell 'em that Bud sent you — they won't have a clue!

I suppose you might have heard that Timex ceased being Sinclair's US distributor a while back, and that Uncle Clive is having troubles finding a suitable/willing replacement. I just read an interesting rumour about one possibility and thought I would pass it along. Originally printed in the March issue of the Boston Computer Society's Sinclair-Timex Users' Group newsletter, it suggested that Sinclair Research was about to sign a US distribution agreement with the Betty Crocker Company (a very well known and popular maker of cake and cookie mixes). The newsletter attributes the statement to an unnamed Sinclair official, who was supposed to have indicated that this will "pave the way for the QL to be sold in thousands of grocery stores and supermarkets around the country." When asked to clarify the rumour, an official spokesperson for Sinclair said: "We assume that this was written in jest. We've been the butt of many jokes, but this one takes the cake." Oh well

From Fastware Inc. comes Thor, a computer-assisted thought organiser. Whether you want to organise a dinner party, a seminar, a legal brief, a budget, a sales territory, a production list or a shopping list, this program can help. Contact the firm at 200 Freeway Drive East, East Orange, New Jersey 07018. (201) 676-7963.

A new publication designed with the young Apple computer user in mind has just published its first issue. Called The Apple's Apprentice, the issue is filled with comics, games, news, reviews, editorials, and so forth all of which has been designed to keep kids interested and involved. Kids are being editorially encouraged to write to the magazine and share their ideas, efforts, and needs, as well as to contribute articles, programs, and games which they have written. The first issue featured, among other things, articles on the computer that was used to create the special effects used in movies such as Star Wars, Star Trek, and Caddyshack. A subscription in the U.S. costs \$24 annually. Contact Emerald City Publishing Inc., P.O. Box 582-AA, Santee, California 92071 for more details.

That's it for this week.

POOLS
THE SPECTRUM

Naigram, Soho Synth Hse, 18A Soho Sq, London W1V 5FB

This is a pools forecast program relying on "an affinity between numbers" to predict score draw results and not upon "team form" fed in by user each week (a saving of at least 1½ hours). A databank of scoredraw results from the league seasons from 1976/77 to early 1983/84 is incorporated into the program, which aims at producing the 18 most likely score draw numbers based on your selection of options of choice of favourite numbers.

The first screen asks for surname — failure to enter this means the program will not run. It has been error-trapped with 'break' disabled and hard copies can be obtained

A menu offers priority table, auto, random, special, banker (own number), random, special, other and none. Having selected how the priority table is to be created you press 'F' or 'S' for processing. Your numbers are compared with the databank and in 'S' mode the program displays each of 18 scoredraw numbers generated, while 'F' displays them at the end of processing

Naigram would enjoy 10% of any pools winnings and offers winners next two updates free of charge.

At J13 I think I'll stick to using a pin. T.W.

Supercode II
THE SPECTRUM
£9.95

CP Software, 2 Glebe Rd, Uxbridge, Middx UB8 2RD

A couple of months ago, I reviewed Supercode and noted that it didn't seem to be Microdrive-compatible. Here's son of Supercode with 20 extra routines and a "save to Microdrive option" at the same price. Well done CP, you really moved quickly!

In addition to the old, thick manual, you get another one which documents the new routines and the transfer to Microdrive, though you can still use them from tape. All the old favourites are here — a million ways of scrolling characters, screens, colours, a multiplicity of zaps and kapows, and a positive

plethora of toolkit routines like renumber etc. Added to that are the program protection tricks. And they're all in machine code

Frankly, that alone would be good value, but CP has added Microdrive related routines, together with even more screen swap/modifying and toolkit routines. To make a customised kit you simply select and string together the bits you want. All this is aided by a linking BASIC program which demonstrates the features, provides you with gen, then auto-saves the routines for you. These are truly professional effects on tap at a modest cost. Highly recommended. D.M.

MONEY
MANAGER
THE SPECTRUM
£5.95

Creative Sparks, Thompson Hse, 296 Farnborough Rd, Farnborough, Hants GU14 7NU

This program, designed for those who hate to write down budgets and add up the horrendous results, would delight Mr Macawber — it deals in round £s only. State the month you want to start the year from, input expense and income headings and enter your budget for each month under each heading. Then, every month, enter the real figures and compare real with estimate

You input the headings, you can alter, delete or add to them at will and need never re-enter them. Budget figures can, if identical, be automatically inserted for the year. They are not replaced with actuals, so comparisons remain meaningful. And you can view monthly or yearly totals of any heading, income, expenditure or cash flow as a normal, percentage, or bar chart comparison. There is even an interest calculation facility, including overdraft or earned interest automatically

Occasionally reaction is slow and the manual, although easy to understand, strains the eyes with its small print, overprinted on a repetitive title background. But an extremely flexible, well-designed and user-friendly package. D.C.

Maths,
music,
money or
pool?

Your micro can be used for many functions — to write music, learn maths, manage your finances or play pool. Which do you choose?

SPECTRUM
THE SPECTRUM
£9.95

XORsoft, Unit 7, Newington St, Hawthorne Ave, Hull HU3 3ND

'John Peel' announces 'Spectrum' loaded and offers the demo of this all machine code musical program. Screen bottom has Spectrum keyboard, showing the redefined musical attributes, while screen top has musical stave with notes moving from right to left — causing corresponding key to glow red.

Loading main program follows — which, when done, gives access to clear and full instructions on how to use this ambitious program (which can be repeated by keying 'I'). Simple musical tuition is available using the keyboard

and time values, time signatures,

sharps, flats and key signatures.

Menu offers: choice of crochet length, edit or write, learning mode, play a tune, recall a tune, tuning mode and save, load and print. The imposing learning mode has two levels, one where random notes pop up on the stave with you having to press the correct key — with three lives — and the other where you choose one of some loaded tunes and the program prints up a note at a time for you to key — with prompts, if needed.

Budding composers can write music, hear it, save it, edit it, alter it, merge two tunes and print hard copy. Try it! T.W.

MATHEMATICS
PACK 2
(Vols 4 & 5)
THE SPECTRUM
£3.99

Solway, 6 Curzon St, Maryport, Cumbria CA15 6L

After the loading screen Volume 4's contents offer mean and standard deviation calculations (useful to researchers — but available on so many calculators) and zeroes of functions. The latter calculates the roots of any function defined as 'f(x)=0' using the one point Newton-Raphson iterative method. The function, in terms of x, is entered with the first derivative of the function and a root estimate and the program will then find the nearest root to that estimate.

Linear regression and numerical integration (also in Pack 2) are included in Volume 5. The former utilises the curve of y = m times x + b, where m = slope and b = xy intercept. Number of pairs of data points, whether to weight y terms, first x, first y, second x and second y are entered before the results as m, b, sigma m, sigma b and a correlation appear. Entering the integrand, number of sub intervals, lower and upper limits of integration in Numerical Integration causes "thinking" to appear on screen, followed by the solution

If error reports appear, entering RUN 5 will return you to the Contents, as will pressing 'r' whenever a green 'r' appears screen top right

Possibly only for serious mathematics students. T.W.

IT'S IN THE AIR

WILL
YOU
CATCH
IT!

Steer round bends, head Commodo beep

and Driving your re

Here are two completely different programs for your Commodore. Drive along a windy road, avoiding hazards, or type and bleep

Car Dodge by Terence Hudson

This game is based on the simple idea of a car traveling along a road. However there are a few added extras.

The road is made up of normal keyboard graphics which can be changed. If you can't manage to get far, you can change the shape of the road by altering the lines from 2000 onwards.

A tune plays continually; the routine for the music was taken from an earlier issue of HCW. You can change the music by altering the DATA in lines 910 to 940.

Car Dodge How it works

10 variables
50-65 read data
100-300 music set up
500-840 machine code
910-940 music data
1000-1010 sprite data
1020-1060 instructions and variables
1100-1200 game loop containing
1160 print background
1170 scroll screen
1190 check for crash
1300-1320 crash routine
1400-1480 finish routine
2000-3000 background strings
N.B. In line 1170 the print statement says.

(HOME) (CRSR DOWN) (CRSR LEFT) (INSERT SPACE)

Key Bleep by Dave Smallwood

Use this program to check whether your typing has registered with the computer. Whenever you press a key, the computer responds with a "bleep".

Once you have set it all up, practise typing and hear the results.

ALPHA TRAINER T1020410

Stainless, 10 Alstone Rd, Stockport, Cheshire

This is a computer version of Scrabble, but is for two players only

The screen has the board layout in the top left with all the usual features of squares to double or triple word and letter scores. To the right of this is a table of letters showing their values and the number available in play

The game starts with players being dealt seven letters to make words in crossword fashion to gain the most points. By positioning the cursor the words are entered on the board. The computer will verify that all the letters used are legal, then ask if

the player's opponent wishes to make a challenge. Naturally, the dictionary must be used here.

Although the program runs perfectly adequately, I'm afraid I wouldn't buy it. If you want to play Scrabble then you might as well get the original board game. Let's face it, you can take it anywhere easily, suffer less eye strain playing, and up to four people can compete. They won't have the chance to see your letters either, unless you really want them to. Needs Extended BASIC

Dungeon Gold

Stainless, 10 Alstone Road, Stockport, Cheshire

This is the sort of game for which I have little patience and soon become bored playing

You have a 10 x 10 maze to explore with the purpose of discovering gold to buy spells and potions. As each room is entered you are shown the walls and exit points. Basic graphics, but saves time waiting for anything more elaborate

Below this a clue is given as to how many rooms away the gold is. Then comes your current status recorded as hit points and experience points. Monsters lurk in the maze and, unless combatted by sword or spell, will attack and bring the game to a close. If you survive, however,

your hit points will increase so the healing powers of potions really are necessary. Once gold has been obtained experience points are awarded, but the higher these become the faster the monsters attack

Once the game has ended you are given your final status. If you've excelled this is "god". A low score means you will be addressed as "scum". Very amusing for the programmer I'm sure, but not what I would call the best possible taste. J.W.

PLANEFALL SINCLAIR SPECTRUM £2.95

Argus Press Software, No. 1 Golden Square, London W1R 3AB

A futuristic strategy game involving a vast merchant starfleet, the object being to have the greatest total assets at the end

There are 11 well-organised screens. The first offers loading, old game or new game options — the latter requires entering of numbers of players, ships and planets, setting a limit to game length and setting sound on/off.

Then a galactic map shows positions of up to 15 star systems relative to Sol

Next screen lists commodity prices and travel time display, with your current cargo status, followed by Travel Printout — overall schedules for all players ships. Then there's a complex Trading Display handling the buying and selling of commodities

Screen top shows real elapsed time, the gametime, Captain's name, Ship's name and star system.

Screen right is ship's log, cargo print-out, onboard cash, bank balance and whether selling or buying is happening

On screen left, messages appear as dealers bid for your cargo and you bid for their merchandise

Other screens are Bank Display, Options Display, Bank Statement, New Star System, ETA and Urgent Message — such as late planetfall or planetary inflation.

A fascinating, enjoyable game that should be in every gamesperson's library.

Space and spelling for enthusiasts

From captain's log to double letter scores — a varied range of software reviews for you

Hammerheads 48K Spectrum £2.95

I.C., 4 Trentbrooke Avenue, Hartlepool, Cleveland TS25 5JW

Has 1982 returned? I ask because this program is just like the ones that first appeared with the early Spectrums

The use of sound far exceeds the quality of the graphics and colour in this poor example of 'mined out'

A poor loading screen leads to the simple introductory screen accompanied by a simple tune and an offer of instructions.

These contain spelling mistakes, are badly laid out and use basic Sinclair capitals.

We are then offered a demonstration, return to instructions, the opportunity to redefine the keys, or the chance to select levels 1 to 5

The game starts with an outlined field, a small key and many (unseen) mines, with you appearing as a sort of octopus. You must collect the key and leave the field by the exit at screen top, avoiding mines as you do so

It's against the clock and you are told how many mines are near. I made it to field two — even more mines — but the time involved in restarting put me off. There's a 'Hall of Fame' — but I didn't make it that far

Perhaps for £2.95 it's good value as it has some nice features

Turbo Extended BASIC Commanders 64 £14.95

Aztec, 18 Gregory Springs La, Mirfield, W Yorks WF14 8LE

Extensions to CBM 64 BASIC are now fairly common but, up to now, rather costly. The appalling Simon's BASIC and the slightly better BC BASIC are good examples. It was therefore with delight that I examined this package. The result confirmed the well-known adage "you get what you pay for". This package seems good value but has silly omissions

As with its predecessors this package adds commands for the easy use of sound and graphics and gives other commands

The graphics routines are quite standard apart from an unbelievably slow circle command. All commands apply only to hi-res mode. What happened to multi-colour mode? The sound commands work well enough but the handbook didn't give any hints on how to use them

Other amazing omissions included: Renumber didn't deal with GOTOs or GOSUBs, I found a DOKE but no DEEK, a FILL command is included which had no real obvious use (nothing worthwhile anyway), the point test used a RAM location rather than return a Boolean result

The package has a small instruction booklet which described all the commands but didn't instruct

In all, this package offers a cheap alternative and is better than nothing.

Two games in one with this program from Andrew Bird, that gives you a chance to 'pit your wits' against the bats and bees

Alien warfare takes a back seat, in favour of two types of airborne creatures that are more familiar to us than many of the inter-galactic beings we usually

In the first part of the game, you are trapped in the courtyard of Dracula's Castle. Your task is to collect 20 'magical' keys and crucifixes, before you can get out through the door.

Unfortunately, although it sounds very easy, three vampire bats make life extremely difficult — making escape almost impossible.

As if this all wasn't enough to have you throwing the nearest heavy object at your monitor, part two of the game will have you just as frustrated.

This time, it's not bats but

You are on the way to the hospital to visit a sick friend, and to cheer this friend up you decide to pick a few flowers. However, the bees do not take kindly to you stealing their property — and try very hard to stop you leaving.

By the end of the game you will probably have been bitten and stung more times than you would care to remember, so think yourselves lucky that it is only a game.

Make a QUANTUM LEAP today...
Our 86 characters by 24 line screen
can transform your SPECTRUM
displays now!

"MICRO-PRINT 85"

is an outstanding utility that lets you
select from a choice of SIX character
itches in your screen and ZX printing.
Either 85 characters-per-line,
or 64 characters-per-line,
or 51 characters-per-line,
or 38 characters-per-line,
or 28 characters-per-line,
or 32 characters-per-line....

Any pitch, any time, any place. Mix all
six within any line. We even give you a
COPY command for any 1-24 line
group. "Micro-print" is incredibly
versatile — nothing else comes close!
The 16 @ 48K cassettes + Demo are £5
(£8 export) from
